

CHRISTINA HOUSTON

JUNIOR SOFTWARE DEVELOPER

I am an eager Software Developer who has recently graduated from the Professional Software Development course at CodeClan. A problem solver who's keen to continue my learning in industry by using my practical coding skills, which have been enhanced from various CodeClan projects, to do so.

After working for four years within an agency as a marketing executive, I've been able to increase my industry knowledge which would often fall into the software engineering field. I gained valuable interpersonal skills and was able to use my creativity across marketing implementation, design and website management. I would like to use this experience to add to my new technical skills and knowledge in my future career.

TECHNICAL EDUCATION

CodeClan

Software Development Student | Jan 2021 - April 2021

- CodeClan is an intensive Bootcamp, aimed at teaching the fundamentals of Software Development. Over the course of the 16-weeks, individuals complete over 800 hours worth of hands on coding, through solo and team projects, code-alongs and practical, instructor lead lessons. I am eager to keep learning the latest development techniques and make my best contribution to the industry.
- Graduated 23rd April 2021.

Projects

GymManager App | Solo Project | Built in 7 days

- github.com/TinaHouston/GymManager
- A web application which allows a gym owner to manage their classes, members and bookings. Tracking active/inactive memberships and classes with/without capacity. Built using Python, HTML5 and styled using CSS with Flexbox.

SkyRabble App | Group Project | Built in 7 days

- <https://github.com/TinaHouston/SkyRabble>
- A web application using the OpenSky and What 3 Words API's. Users can search for their location using What 3 Words and find a list of flights in their area and the flight location at that given time. The app also shows the flights pinned onto a Leaflet.js map. Upon clicking on a specific flight, further details of this flight and the destination/origin airport can be seen. The app also features a scrabble game in which users can use the What 3 Words of the plane locations to play a game of Scrabble. Built using JavaScript, HTML5 and CSS, and writing data into a database using MongoDB.
